

The use of cell phones in the air is not only inappropriate but unsafe. We have no data to suggest that cell phone use doesn't interfere with aircraft navigation systems. The NPRM claims that cell phone use among passengers would enhance security onboard because it would allow better communication with people on the ground. By the same token, it would enable terrorists on board to communicate with one another to execute a hijacking more effectively. They could, for example, simply take out a Blackberry to email the positions of flight crew or someone they suspect to be a Federal Air Marshal or to communicate if the flight deck door were being opened for a pilot.

The mixture of thin air, cramped quarters, frayed nerves and alcohol consumption already pushes passengers to the limit. Add multiple, high volume cell phone conversations and the recipe for disaster is complete.

The introduction of cell phone use in the cabin will not only increase tension among passengers, it will compromise flight attendants' ability to maintain order in an emergency. Imagine trying to prepare passengers for an evacuation and you're getting the 'wait a minute finger wag' while the people in that area miss out on crucial information you are trying to communicate.

I would like to make clear my points:

- There is no hard evidence that cell phone use doesn't interfere with navigational instruments.
- Cell phone use would enable terrorists to coordinate a plan of action more effectively.
- The NPRM would leave it up to flight attendants to police the use of cell phones onboard the aircraft compromising our ability to maintain a safe, secure cabin environment and to conduct emergency evacuations.
- It would make an already tense cabin environment even more stressful.

Thank you for taking the time to protect my work place.
